## EDUCATION

**Bachelor of Technology, Indian Institute of Technology, Patna**

May 2023

- Computer Science and Engineering, CGPA: **8.88/10**
- **Key Courses:** Data Structures, Algorithms, Operating Systems, DBMS, Computer Networks, AI, Computer Security

## WORK EXPERIENCE

**Web Solutions Engineer II (L4), Google**

July 2025 – Current

- Built an Explainable AI engine for an escalation prediction GBDT model (75+ signals); integrated SHAP feature attribution with custom LLM prompts to translate raw ML outputs into business-friendly root-cause diagnostics.
- Architected an end-to-end review automation pipeline incorporating page crawling, deterministic logic, and Gemini LLM inferences to eliminate double content reviews, delivering ~\$1M in annual savings.
- Co-engineered a high-precision computer vision model using Gemini image embeddings and a custom TensorFlow CNN for Google Ads image moderation, achieving 99.7% classification accuracy.

**Software Engineer, Infinite Reality** (acquired Ethereum Engine)

July 2023 – July 2025

- Worked collaboratively to revamp the UI of our web app using Tailwind CSS and React.js, resulting in a 70% reduction in bundle size and enhanced user experience.
- Developed a novel format for volumetric videos, leading the development of both the encoder and a highly adaptive player. The player dynamically detects device capabilities, ensuring optimal resolution playback, akin to YouTube's adaptive streaming technology.
- Engineered robust **Docker** tests in CI/CD, streamlining development workflows and ensuring consistency across all 3 environments (Linux, MacOS and Windows).

**XROS Fellow, Ethereum Engine**

April 2023 – June 2023

- Developed UVOL2 player for Ethereum Engine with DRACO and KTX2 compression, reducing texture bandwidth usage.
- Enabled backward compatibility for UVOL1 and UVOL2 formats to improve accessibility. [View Project Report](#)

**Software Engineering Intern, Arista Networks**

May 2022 – July 2022

- Implemented Golang service for Partial Configuration Management, optimizing data structures and memory allocations for low-overhead execution.
- Designed an optimized execution algorithm for switch configuration changes to increase throughput and reduce state-transition latency.

## AWARDS & LEADERSHIP

- Chosen as one of the top 100 candidates out of over 10,000 applicants for the XROS Fellowship sponsored by **Meta**. Post-fellowship, honored with distinguished Top-10 Fellowship Award.
- Led a team of 5, and successfully completed and deployed 2 Web apps as **E-Cell Tech Lead**.

## PROJECTS & TECHNICAL WRITING

**Anatomy of a Fake Job Interview: Git Hook Malware**

Technical Article, July 2026

- Detected and reverse-engineered a state-sponsored Git hook malware campaign disguised as a take-home interview.
- Reached the front page of **HackerNews** and was featured in major developer publications including **TLDR.tech** and **Lobsters**, driving significant community engagement.

**Leetcode Visualizer**, [youtu.be/m-ryVXzOFys](https://youtu.be/m-ryVXzOFys)

- Displays statistics about solved, unsolved Leetcode problems with dark-mode support.
- Integrated Google Analytics to track user retention; served over 1,300+ active users.

## TECHNICAL SKILLS

|                                   |                                                                           |
|-----------------------------------|---------------------------------------------------------------------------|
| <b>Languages &amp; Frameworks</b> | Python, TypeScript, JavaScript, C++, Java, Golang, React.js, Tailwind CSS |
| <b>Backend &amp; Infra</b>        | Spanner, gRPC, Node.js, REST APIs, Docker, AWS, Google Cloud              |
| <b>ML &amp; AI</b>                | TensorFlow, LLMs (Gemini), SHAP, Computer Vision (CNNs), GBDTs            |
